With Identity2.0, I can check for membership by doing something like this: if (User.Identity.IsAuthenticated) { if (User.IsInRole(MembershipUserRoles.Staff)) { //do some stuff } } But now I am using Identity 2.0 and running into an issue with the IsUserInRole(int userId, int roleId) method. What is the correct way of doing the following? I have also put an image for context. I added the API method to my IdentityUser class like this: public bool IsInRole(IdentityRole role) { if (role == null) { throw new ArgumentNullException("role"); }
