I'm running Windows 10, 2.7 Ghz Core i7 with 8Gb of RAM, but still as slow as a turtle uploading my images. Even with the new functionality with Hyper-Threading enabled the upload and download is still slow at around 10-20 seconds per image when I'd like to see it be about a second or less. I decided to check out the new Adobe AI Engine for large files, multi-page documents and for batches of images. I was pretty impressed at how a decent-sized list of web links and links to relevant search terms to use appeared in the bottom of panels within the AI Engine. Of course, there's not much choice when it comes to adding and removing tabs in the UI, but this feature does have its place in the Photoshop UI, at least. Also, users can now choose not to have the Adobe Media Encoder or Adobe Print Engine automatically open when a file is opened. The Archive feature also now includes Time Machine, making it easy to back up your files simply by connecting your hard drive or network. You can even split and merge version-control metadata within your archives. Again, this seems like a feature that customers would want to see, although perhaps only if they can avoid the tool failing to open the necessary files. Unfortunately, with the AI Feature application now finding a few of the most advanced features available in Photoshop CS6 (one of which is probably already mentioned in the section above), it may be a good idea to keep CS6 active, even if the CS8 features continue to be under development. All we need to do now is wait for CS7 to finish developing too.

As the name of this application implies, it enables photographers, illustrators, graphic artists, and many others in all creative fields to edit digital photos or quickly recognize the details of an illustration. All Photoshop CS5 owners receive an update for this product for around \$29 95. Adobe Photoshop CS6 is more than a great photo "editor".
