Could this be the new Photoshop? Based on comments by Adobe engineers it certainly seems that way. In October, Adobe added a portal hosted by **Adobe Get Sketch** to take visitors through a sneak peek at what they could expect from the new Photoshop in the future. The demos include toggling between different applications (apparent with Adobe XD and Bridge in one group) and accessing several Adobe tools. The most popular features in the new Photoshop, described by Adobe, are Color and Scene Recognition, Filmstrip and Create Space. Let's take a closer look... For starters, new users of the Creative Cloud will see their app and site navigation in one long bar. Adobe's engineers explain that all of Photoshop's tools will remain within the same place in this new version of the software. That will simplify workflow compared with Adobe CC members on a Mac or Windows machine who had to use the app or site in a different way. The new interface is described in a **community forum thread** . 'Color in Adobe Photoshop Elements (CC) will automatically infill missing colors when the tonal range of an image is extended. This happens when you apply a color mask, adjust tonal values with curves or brighten images with curves. You can now easily switch between different versions of Adobe's products with one feature: the Reveal All menu. Find your previous version of a product and select it, and you'll see the options and main window for that version of the app.
