Adobe Creative Suite 6 contains a lot of software tools, and as the name suggests, it is aimed at professional users that want to create and design. Adobe Creative Suite 6 is an upgrade of the older versions of the suite and includes a plethora of different software tools. As already mentioned, the suite is aimed at professional users, so the software tools are all designed to allow users to create stunning designs. The suite is designed to allow users to make text, images, graphics, and even web pages for them to share across the web. Adobe Creative Suite 6 also includes the new CorelDRAW Graphics Suite, along with the newer versions of Photoshop and Audition. The suite is useful for creating documents, flyers, brochures, magazines, and other print media. It's also useful for creating illustrations and animations. Finally, it can also be used to create web pages. However, Adobe Creative Suite 6 is not just used for web design. It's also capable of creating many other types of designs.

The new RAW editor (from Photoshop in 2017 all the way to Lightroom in 2018) is also significantly faster than the previous version. More importantly, many of the basic adjustments, such as levels, curves, or quick fix options, have been improved. Some of the older methodologies hold up to date, like the Built-In Sliders option, the "Right-Click for Histogram Settings and Adjustments" and the freehand tool, although I do miss the Tint and Exposure slider tool. Other buttons can be surprisingly out-of-date, like the "Straighten" tool's Triangle for aligning with the Center Point, which nobody uses or seems to be learning in 2019. More tools and options are always welcome, I think, but if I was choosing between speed and options, I'd go for speed. I am quite aware that this is a matter of taste, so if you prefer a more complex layout, feel free to give Lightroom a try. One of Lightroom's feature that's been around for a while, but became much better with the new version, is HDR, along with Shadow and Highlight. Photoshop's HDR is the standard that the competition has been trying to beat since day one, and so far, Lightroom seems to have a good balance between exposure and quality of the result. I would add that the new healdr mode levels are more perceptually accurate than they used to be, especially on Windows, and that this may have changed from the previous version. One of Lightroom's newer features is the ability to create a Log channel for images intended for printing, but even though this is powerful, I would have preferred to be able to use one of the darker channels for that purpose. Personally, I would have preferred a choice between showing the darker and lighter channels, either as their own options, or as a slider in the main view.
